

What if ...

... you did not have to reach the ridge?

What if ...

... you could now do safely,  
what has never been done?

Would it change the way you work?

You betcha!  
That's why most steep  
roofers buy at least two.

SLATOR

OSHA Compliant.  
ANSI Certified.

First Safe Ascent. First Safe Descent.  
proudly made in the USA

What if ...

... there were tools that would make  
steep asphalt shingle and slate repairs

EASIER,

FASTER,

SAFER?

*Seemingly troublesome tasks.  
Become simple and safe.  
With the right tools.  
And the right attitude.*

What if ...

... they were inexpensive  
and your crew actually

ENJOYS

USING

THEM?

What if ...

... the First Man Up had safer access to  
install fall protection for the crew?

... the Last Man Down had a safer descent?

... the tools could be left in place  
for the painters, masons and siders  
to do their jobs more safely?
