PHANTOM 4
VISIONARY INTELLIGENCE. ELEVATED IMAGINATION.

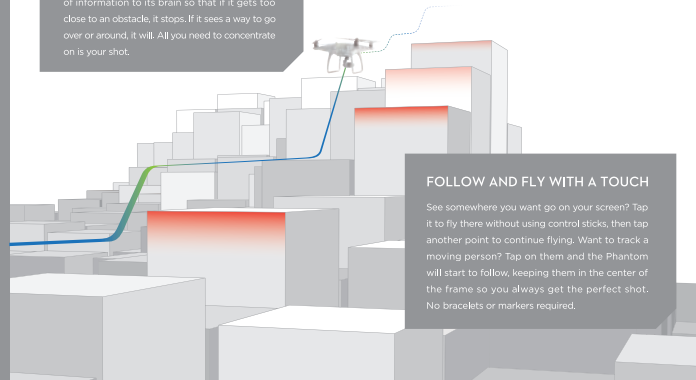

VISIONARY INTELLIGENCE. ELEVATED IMAGINATION.

The DJI Phantom 4 is the smartest flying camera DJI has ever created. Able to fly intelligently with a tap, automatically create seamless tracking shots, fly intelligently over or around obstacles and much more. Flying has never been this easy or as much fun.

SENSE AND AVOID

The Phantom 4 is your creative sidekick. Twin front-facing optical sensors send a constant stream of information to its brain so that if it gets too close to an obstacle, it stops. If it sees a way to go over or around, it will. All you need to concentrate on is your shot.

FOLLOW AND FLY WITH A TOUCH

See somewhere you want go on your screen? Tap it to fly there without using control sticks, then tap another point to continue flying. Want to track a moving person? Tap on them and the Phantom will start to follow, keeping them in the center of the frame so you always get the perfect shot. No bracelets or markers required.

CAMERA

Optimized for aerial imaging, the Phantom 4 camera shoots super crisp 4K video at 30fps and 1080p at 120fps. Its stills are 12 megapixel and Adobe DNG RAW compatible. An 8 element aspherical lens eliminates unwanted fisheye distortion and minimizes chromatic aberration for a professional look.

MORE STABLE

The ultra-stable gimbal is integrated deeply into a super lightweight, rigid magnesium core, keeping weight low and the center of gravity optimized for stability in any environment.
